Lab Program 8:   06/02/24

Write a program which creates two threads, one
thread displaying "BMS College of Engineering"
once every ten seconds and another displaying
"CSE" once every two seconds.

```java
class Thread1 implements Runnable {
    Thread t;
    public Thread1() {
        t = new Thread(this, "NThread");
        System.out.println("CT: "+t);
        t.start();
    }
    public void run() {
        try {
            for(int n=5; n>0; n--) {
                System.out.println("CSE"+n);
                Thread.sleep(2000);
            }
        }
        catch (InterruptedException ie) {
            System.out.println("CSE Interrupted");
        }
        System.out.println("CSE quitting");
    }
}
```

```java
public class PrintCollege {
    public static void main(String args[]) {
        new Thread();
        System.out.println("Back in main");
        try {
            for (int n=2; n>0; n--) {
                System.out.println("BMSCE"+n);
                Thread.sleep(10000);
            }
        }
        catch (InterruptedException ie) {
            System.out.println("BMSCE interrupted");
        }
        System.out.println("BMSCE quitting");
    }
}
```

Output:
Back in main
CSE 5
BMSCE 2
CSE 4
CSE 3
CSE 2
CSE 1
BMSCE 1
CSE quitting
BMSCE quitting
